VeilGuard WINDOWS APP

Protect every desktop app, not just the browser.

Sensitive data leaks from desktop apps too: AI assistants, office apps, chat, email and code editors. The VeilGuard Windows app sits in the system tray and checks what you paste or send in those apps, on your PC.

WHY IT EXISTS

Desktop apps are a blind spot

Browser tools can't see what you type into desktop AI assistants, chat apps or code editors.

Work happens everywhere

Client data moves between documents, chats and AI tools all day. One paste is enough.

Rules are hard to enforce

Policies on paper don't stop a tired person pressing Enter at 6pm.

THE GAP IT FILLS

Training and policy alone

- Relies on people remembering every time
- Nothing happens at the moment of the mistake
- Leaves no record of near misses

VeilGuard for Windows

- Checks paste and Enter in the apps you choose, on your PC
- Mask & send, edit or send anyway; admins can require masking
- Group Policy, silent install, Outlook add-in and a team console

WHAT IT DOES

1. **Install in a click**
   Runs from the tray for one user, no admin rights needed. IT can roll it out silently.
2. **It watches the apps you pick**
   AI assistants, office and email apps, chat apps and code editors. It also redacts whole documents.
3. **You stay in control**
   Clear warnings and a local history. Optional on-device AI also catches names and addresses.

BUILT FOR

Healthcare · Banking & finance · Legal · Accounting · Government · Software teams · Small businesses · IT & security

Private by design. Free to start.

Everything runs on your PC · No account needed
Team plans from $15 a month
