VeilGuard

BROWSER EXTENSION · CHROME · EDGE · FIREFOX

Stop leaks to AI chats before you press Send.

Staff paste API keys, patient details and client files into AI assistants every day. VeilGuard checks every prompt, paste and upload in the browser and masks it first, so you can allow AI without losing control of regulated data.

WHY IT EXISTS

AI feels private
Prompts are stored and can train models. One paste can expose a client.

Blocking AI fails
People use it anyway on personal devices, with no record.

Leaks are expensive
Fines, breach notices and lost trust. A sent prompt cannot be unsent.

HELPS REGULATED TEAMS STAY COMPLIANT

Healthcare
HIPAA · UK GDPR · NHS DSPT

Patient names, NHS, MRN and NPI numbers, insurance IDs and diagnoses.

Payments & retail
PCI DSS

Card numbers (Luhn-checked), CVV, expiry and track data never reach a chat.

Banking & finance
GLBA · SOX · FCA

Account, IBAN, SWIFT and routing numbers, loan and brokerage accounts.

Legal
Privilege · Client confidentiality

Privileged markings, client and matter names, contracts and term sheets.

Any EU / UK customer data
GDPR · UK GDPR · CCPA

Emails, phone numbers, national IDs, passports, addresses and dates of birth.

Tech & government
SOC 2 · ISO 27001 · CUI

API keys, cloud credentials, passwords, secrets and classification markings.

Evidence for auditors Tamper-evident local evidence log, masked history, admin audit log, monthly compliance report, forced redaction, policies by group and SIEM export (Splunk, Sentinel, Chronicle, QRadar, Elastic).

VeilGuard helps support these programmes and policies. No single tool makes an organisation compliant on its own.

WHAT IT DOES

1. **Use AI as normal** — Works on AI chats, search boxes and any site you choose.
2. **It checks before sending** — 345 detectors for keys, cards, IDs and more, even in a sentence.
3. **You choose** — Mask & send, mask & keep editing, use placeholders or send anyway.

ALSO INCLUDED

Phishing & look-alikes — Fake sign-in pages, typosquats and brand impersonation.

Fake CAPTCHA / ClickFix — Blocks pages that try to make you run commands.

Placeholders — The AI sees [EMAIL_1]; you see the real value in the answer.

Screenshots & images — Text in pasted and uploaded images read on your device.

Sensitivity labels — Block, warn or allow by Purview or Google label.

Family protection — Age-appropriate AI prompts and searches, behind a parent PIN.

Enterprise console — SSO, SCIM, five roles, audit log, review queue and tickets.

Managed roll-out — Force-installed, tamper-protected and enforced offline.

Private by design. Free to start.

Checks run in your browser · No account needed
Team plans from $15 a month
