VeilGuard WINDOWS APP

Protect every desktop app, not just the browser.

Regulated data leaks from desktop AI assistants, office apps, email, chat and code editors too. The VeilGuard Windows app sits in the system tray, checks what people paste or send in the apps you choose, and stops it before it leaves the PC.

WHY IT EXISTS

Desktop apps are a blind spot
Browser tools can't see desktop AI assistants, chat apps or code editors.

Policy alone fails
Rules on paper don't stop a tired person pressing Enter at 6pm.

Leaks are expensive
One pasted patient list or client file can mean fines and breach notices.

HELPS REGULATED TEAMS STAY COMPLIANT

Healthcare
HIPAA · UK GDPR · NHS DSPT
Patient names, NHS, MRN and NPI numbers, insurance IDs and diagnoses.

Payments & retail
PCI DSS
Card numbers (Luhn-checked), CVV, expiry and track data never reach a chat.

Banking & finance
GLBA · SOX · FCA
Account, IBAN, SWIFT and routing numbers, loan and brokerage accounts.

Legal
Privilege · Client confidentiality
Privileged markings, client and matter names, contracts and term sheets.

Any EU / UK customer data
GDPR · UK GDPR · CCPA
Emails, phone numbers, national IDs, passports, addresses and dates of birth.

Tech & government
SOC 2 · ISO 27001 · CUI
API keys, cloud credentials, passwords, secrets and classification markings.

Evidence for auditors Tamper-evident evidence log, admin audit log, monthly compliance report, forced redaction, tamper protection and SIEM export (Splunk, Sentinel, Chronicle, QRadar, Elastic).

VeilGuard helps support these programmes and policies. No single tool makes an organisation compliant on its own.

WHAT IT DOES

1. **Install in a click**
Runs from the tray, no admin rights needed. IT rolls it out with the MSI, Intune or Group Policy.

2. **It watches the apps you pick**
AI assistants, office and email apps, chat apps and code editors. Also redacts whole documents.

3. **You stay in control**
Mask & send, mask & keep editing, or send anyway; admins can require masking.

ALSO INCLUDED

Outlook add-in
Checks emails and attachments at Send; installs from the app.

USB, print & labels
Monitor, warn or block USB copies, printing and labelled files.

Images & screenshots
Reads text in pasted images and picture files, on your PC.

Code-commit checks
Stops git commits that add secrets.

Family protection
Age-appropriate prompts in desktop AI apps, parent PIN.

Enterprise console
SSO, SCIM, five roles, audit log, ServiceNow and Jira tickets.

Phone clipboard
Copy on Android, paste on the PC: local, end-to-end encrypted.

Tamper protection
Can't be paused or removed on managed PCs; works offline.

Private by design. Free to start.

Everything runs on your PC · No account needed
Team plans from $15 a month
